Inspired for Better Living

Experience Spira®

Spira® is an innovative footwear brand premised upon a patented footwear technology called WaveSpring®. Our Company exists to improve the human condition by producing shoes that enhance the quality of people's activities and thus the quality of their lives.

What is WaveSpring® Technology?

The WaveSpring® is a stable and lightweight spring that is placed in the heel and/or forefoot of our shoes. The patented technology allows people to participate in their activities for longer periods of time, with far less stress on muscles and joints.

Why is the WaveSpring® a superior cushioning system?

The WaveSpring® returns energy with every step. Much of the energy that is otherwise lost to the ground is recycled to the wearer, providing a remarkable combination of cushioning and resiliency. Spira® allows most people to stand, walk, run and compete with less strain and fatigue than other shoes.

Most shoe cushioning technologies rely upon a variety of compressive foams and similar materials that may provide an initial sense of comfort, but begin to break down almost immediately. Because the WaveSpring® is mechanical it provides a "new shoe" feel for the life of the shoe and will not lose its extraordinary feel over time.

The WaveSpring® is a tunable technology. Each spring is calibrated based upon the size of the shoe and nature of the proposed activity. As a result there is a different size spring depending upon the size of the shoe and the type of shoe. Our walking shoes, for example, have a different WaveSpring® size and configuration than our running shoes.

WaveSpring® Technology

Exerted Force

Returned Energy

Experience the Exceptional Benefits of WaveSpring® Technology

- Stores and releases energy with every step
- Reduces injury, fatigue and impact forces
- Superior cushioning - no cushioning

breakdown of shoe over time

Vento • Performance Trainer

The Vento is a new addition to the performance running collection. The style utilizes a brand new custom developed last for superb fitting on most foot types. The upper features a stitch-less custom engineered mesh with an internal support structure creating a supportive fit. The midsole incorporates new advances to the Patented WaveSpring® Technology, and in conjunction with the softer density heel strike cushion pad, this model is perfect for runners and casual wears alike.

- For neutral to moderate gait
- Supports Low, Normal, and High arch foot types
- A mid to high mileage performance training shoe for the recreational to serious runner or walker
 - o Superior long term cushioning
 - o Maximum resiliency and energy return
 - o Protection against fatigue, stress, shock and impact forces
- Excellent long term cushioning combined with a high level of responsiveness
- Two low profile, lightweight stainless steel WaveSpring® in the forefoot and one in the heel
 - o Superior long term cushioning
 - o Maximum resiliency and energy return
 - o Protection against fatigue, stress, shock and impact forces
- Compression molded dual density EVA midsole
 - o Softer heel strike Cushioning Pad for max impact force reduction
- Breathable and stretchy engineered mesh upper with an internal support infrastructure providing an amazingly good fit and feel.
- Laminated Tongue construction for max breathability and flexibility
- Molded TPU arch shank for stability and support
- One piece, wave-action, rubber outsole to promote ergonomic movement
- Ortholite branded custom dual density insole is anti-microbial, lightweight and will not breakdown over time.
 - o Insole is removable to accommodate custom orthotics if needed.

"The shoes were great. They provide me the opportunity to race more often with less recovery time between races. Likewise, the Spira training shoes allow me to train at a more intense effort level while protecting me from injury. My third marathon victory in less than four months. There is no way I could do that without Spira."

- David Cheruiyot

MEN'S & WOMEN'S PHOENIX- RUNNING

Phoenix • Performance Trainer

The Phoenix is a new addition to the cross-platform collection. The style utilizes a brand new custom developed last for superb fitting on most foot types. The upper is based on a half booty construction with a breathable sandwich mesh in the vamp and quarters. The midsole incorporates new advances to the Patented WaveSpring® Technology, and in conjunction with the softer density heel strike cushion pad, this model is perfect for all activities.

- For neutral to moderate gait
- Supports Low to Normal arch foot types
- Excellent long term cushioning combined with a high level of responsiveness
- Two low profile, lightweight stainless steel WaveSpring® in the forefoot and one WaveSpring® in the heel provide:
 - Superior long term cushioning
 - Maximum resiliency and energy return
 - Protection against fatigue, stress, shock and impact forces
- Compression molded dual density EVA midsole
 - Softer heel strike Cushioning Pad for max impact force reduction
- Molded TPU arch shank for stability and support
- Breathable sandwich mesh upper
- Half booty style construction is stretchy and supportive, offering a sock-line comfort with a locked-in feeling.
- Lace-Loop webbings are integrated within the upper mesh layers for midfoot support that helps with the locked-in feeling.
- Internal molded heel counter for stability
- One piece, wave-action, rubber outsole to promote ergonomic movement
- Ortholite branded custom dual density insole is anti-microbial, lightweight and will not breakdown over time.
 - Insole is removable to accommodate custom orthotics if needed.

Scorpius II • Stability Running

The Scorpius II is the latest version of this proven model. The upper has been completely revamped with high end mesh and synthetic overlays, and also incorporates the new 3D molded SpiraCage instep lock technology to provide a much better fit and feel than the first generation. This model offers a unique combination of cushioned comfort and stability.

- For runners who need over pronation protection and support in conjunction with excellent cushioning
- A mid to high mileage stability training shoe for indoor and road surfaces
- For low to normal arch foot types
- Two low profile, lightweight stainless steel WaveSpring® in the forefoot and one in the heel
 - Superior cushioning
 - Maximum resiliency and energy return
 - Protection against fatigue, stress, shock and impact forces
- Compression molded dual density EVA midsole for medial stability support
- Wide heel platform
- Semi-curved training last
- Strobel lasted construction
- High abrasion rubber strike pad for durability
- Forefoot flex grooves for quick transition and flexibility
- Breathable open cell insole; removable to accommodate orthotics

Stinger XLT 2 • Performance / Lightweight Trainer

New and Improved, The Stinger XLT 2 performance trainer has undergone a complete materials update, improved fitting across the entire size run, and a new longer lasting rubber outsole. This is an ideal race day shoe for runners who need the support of a training shoe, with the lightweight responsive qualities of a racing shoe. This trainer is extremely well cushioned and helps to maximize running performance. This style is popular with elite athletes, recreational runners and weekend warriors alike.

- For runners with a neutral to moderate gait
- Normal to high arch foot types
- Two low profile, lightweight stainless steel WaveSpring® in the forefoot and one in the heel
 - Superior cushioning
 - Maximum resiliency and energy return
 - Protection against fatigue, stress, shock and impact forces
- Responsiveness of a long distance racing shoe
- Breathable 3 layer mesh with synthetic support overlays molds to the foot
- Support straps are welded to the upper and tie into the lacing system
- Curved training last
- Strobel lasted construction
- Two-piece compression single density molded EVA midsole pod construction
- High abrasion heel strike pad helps increase durability
- Grooved forefoot provides transition flexibility
- Breathable open cell insole; removable to accommodate orthotics

"Running shoes with integrated WaveSpring® technology may have the benefit of lower oxygen cost for running at a submaximal effort while offering the injury reduction benefit of cushioning. The use of this make of running shoe [Spira] by serious recreational runners may result in improved performances in endurance running events."

The study concluded that runners would complete a marathon at an 8:30 minute per mile pace an average of six minutes faster simply by switching shoes."

- Kenneth J. Reiss
Ph.D., CSEP-CEP, ACSM-CES
Northern Alberta Institute of Technology

MEN'S & WOMEN'S CLASSIC WALKER

Classic Walker • Comfort Walking

The Original Classic Walker never goes out of style with a leather upper and spring loaded soles. The Classic offers superior impact absorption, energy return and exceptional cushioning and comfort. Receiving the Medicare seal of approval, this style is perfect for walking, standing for long periods of time and helps to relieve stress, pain and fatigue on the feet, joints and body.

- For people who need maximum cushion to aid in the reduction of fatigue and overuse related walking problems
- Contains WaveSpring® technology, one in the heel and one in the forefoot
 - Helps to reduce pain, stress and fatigue on joints and the body
 - Provides a return of energy with every step
- Lace-up closure
- Co-molded external support shank for torsional stability

Classic Walker 2 • Comfort Walking

The Classic Walker 2 is an update to the original Classic Walker. While the core, Dual WaveSpring cushioning technology is the same, everything else has been changed. The Classic Walker 2 uses a newly designed last, providing for more toe room and better fitting in the instep and heel. A full external midfoot shank support has been added to provide better torsional stability through the gait cycle. This style is perfect for walking or standing for long periods of time and helps to relieve stress, pain and fatigue on the feet, joints and body.

- For individuals who need maximum cushion to aid in the reduction of fatigue and overuse related walking problems
- Contains WaveSpring® technology, one in the heel and one in the forefoot
 - Helps to reduce pain, stress and fatigue on joints and the body
 - Provides a return of energy with every step
- Lace-up closure
- Co-molded external support shank for torsional stability
- Compression molded single density EVA midsole
- Full width external midfoot shank
- Wider base than the original
- Genuine Full Grain Leather upper
- Semi-Curved last
- Strobel lasted construction
- Oil, Wet and Dry slip resistant rated rubber outsole suitable for restaurant/service type conditions
- Memory Foam insole for extra comfort; removable to accommodate orthotics
